Sir:

PETITION UNDER 37 C.F.R. § 1.144

Pursuant to 37 C.F.R. § 1.144, and prior to entry of Applicant's Notice of Appeal, Applicant respectfully petitions from the Restriction Requirement mailed August 24, 2004.

Applicant traversed the Restriction Requirement in a response filed November 8, 2004, and requested reconsideration of the claims.

The Restriction Requirement restricted claims 1-7, drawn to a method of making a semiconductor device, from claims 8-20, drawn to a semiconductor device.

The Restriction Requirement asserts that the method claims (1-7) and the structure claims (8-20) are distinct because the structure of claims 8 and 16 may be manufactured by a materially different process than that recited in claim 1. Specifically, the Restriction Require-

ATTORNEY DOCKET NO. 01-P-002 (STMI01-00013)
U.S. SERIAL NO. 09/871,463
PATENT

ment asserts that the product and process are distinct because "etching, instead of chemical mechanical polishing, could be used to remove portions of the protective barrier layer."

Restriction is only proper where the claims are independent or distinct. MPEP § 806. In passing on questions of restriction, the claimed subject matter must be compared in order to determine distinctness and independence. MPEP § 806.01. In the present application, pending independent claim 8 does not require removal of any portion of the protective barrier layer. Instead, claim 8 reads on a structure prior to removal of portions of the protective barrier layer. Thus, the existence of alternate methods for removing portions of the protective barrier layer, other than by chemical mechanical polishing as recited in claim 1, is NOT RELEVANT to whether the structure of claim 8 could be fabricated by a materially different process.

In addition, it is not apparent that the structure recited in pending independent claim 16 could be formed by etching rather than chemical mechanical polishing. Claim 16 recites a portion of a protective barrier layer over a central region of the tungsten and within the opening. Isotropic etching would uniformly remove a conformal protective barrier layer, while anisotropic etching for partial removal would remove the vertically thinner portions (e.g., at the center of an opening) leaving sidewalls alongside vertical or sloped surfaces. Neither type of etching would result in the structure recited in claim 16.

In addition, a process of making and the product made are distinct inventions only if:
(A) the process as claimed is not an obvious process of making the product and can be used to

U.S. SERIAL NO. 09/871,463
PATENT

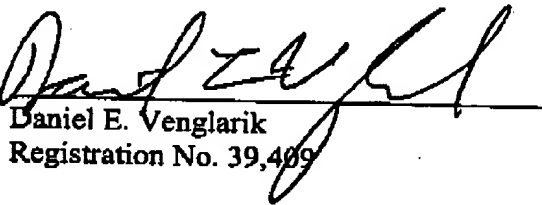

make other and different products; and (B) the product as claimed can be made by another and materially different process. The Restriction Requirement provides no basis for concluding that simple etching is materially different--i.e., patentably distinct--over chemical mechanical polishing.

The Commissioner is hereby authorized to charge any additional fees connected with this communication or credit any overpayment to Deposit Account No. 50-0208.

Respectfully submitted,

DAVIS MUNCK, P.C.
